**DETAILED ACTION**

***Response to Arguments***

1. In view of the appeal brief filed on 5/31/05, PROSECUTION IS HEREBY REOPENED.

A new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
- (2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 thru 3, 6, and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Okabe et al. JPO 62-252139. Okabe discloses (see, for example, figure 2 (E)) an element separation area (semiconductor device) comprising a semiconductor substrate 11, and element isolation trench 23. On page 3, lines 15-18 of the translation, Okabe discloses a trench of

selected depth formed on a semiconductor substrate for a trench created around an element being filled with an insulation part to provide an element isolation part. The trench width of an upper end, trench width of a bottom surface, side surface, first side surface, second side surface and third side surface are identified in the figure below (FIG. 2 (E) of Okabe JPO 62-252139). The trench width of an upper end is larger than the trench width of a bottom surface. The length of the side surface located between the upper end and bottom end is larger than a straight line connected the upper end and bottom end. The first side surface and second side surface are perpendicular to the substrate and are connected by an inclined third side surface.

Regarding the limitation "element isolation trench being substantially filled with an insulator", this limitation is inherent since the translation (already provided in the previous action) states (see page 3, third paragraph) that the trench is filled with an insulation part to provide an element separation part.

***Response to Arguments***

4. Applicant's arguments with respect to claims 1-3, 6, and 18 have been considered but are moot in view of the new ground(s) of rejection.
